

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

1. (Cancelled)
2. (Previously presented) The filter cartridge as described in claim 30, wherein the strip of filament nonwoven is turned into a pleated matter having 4 to 50 pleats and wound around a perforated cylinder in a twill form.
3. (Original) The filter cartridge as described in claim 2, wherein at least a part of the pleats of the pleated matter is arranged in non-parallel.
4. (Original) The filter cartridge as described in claim 2, wherein the pleated matter has a void rate of 60 to 95%.
5. (Previously presented) The filter cartridge as described in claim 30, wherein the first filtration layer of the filter cartridge has a void rate of 65 to 90%.
6. (Withdrawn) The filter cartridge as described in claim 1, wherein the second filtration layer is prepared by winding a perforated sheet around a perforated cylinder in a layer form.
7. (Withdrawn) The filter cartridge as described in claim 1, wherein the second filtration layer has a two-layer structure comprising a filtration layer (a) prepared by winding a strip of filament nonwoven comprising a thermoplastic fiber prepared by bonding at least a part of fiber intersections around a perforated cylinder in a twill form and a filtration layer (b) in which the strip of filament nonwoven is continuously wound from the filtration layer (a) in a twill form while winding a perforated sheet in a layer form; and the first filtration layer is a filtration layer in which the strip of filament nonwoven is continuously wound from the second filtration layer in a twill form.

8. (Withdrawn) The filter cartridge as described in claim 1, wherein the second filtration layer is prepared by folding a perforated sheet around a perforated cylinder in a pleat form and molding it in a cylindrical form.
9. (Withdrawn) A filter cartridge prepared by winding a strip of nonwoven having aperture parts and comprising a thermoplastic fiber obtained by bonding at least a part of fiber intersections around a perforated cylinder in a twill form.
10. (Withdrawn) The filter cartridge as described in claim 9, wherein the strip of nonwoven having aperture parts is a pleated matter having 4 to 50 pleats.
11. (Withdrawn) The filter cartridge as described in claim 9 wherein the aperture part has an area ratio of 5 to 60% based on the whole area of the strip of nonwoven having aperture parts.
12. (Withdrawn) The filter cartridge as described in claim 9, wherein a porous material other than the strip of nonwoven having an aperture part is used for a part of the filtration layer in the filter cartridge.
13. (Canceled)
14. (Canceled)
15. (Withdrawn) The filter cartridge as described in claim 13, wherein the end face-sealed parts are formed by combining a sheet comprising the same resin as at least one of the thermoplastic resins used for the strip of nonwoven constituting both end parts on the surfaces of both end parts of the filter cartridge and melting or softening the sheet, thereby integrating it with the nonwoven.
16. (Withdrawn) A filter cartridge prepared by winding a strip of nonwoven comprising a thermoplastic fiber obtained by bonding at least a part of fiber intersections around a perforated cylinder in a twill form, wherein the nonwoven has a tongue section part.
17. (Withdrawn) The filter cartridge as described in claim 16, wherein the tongue section part has an area ratio of 10 to 80% based on the whole area of the strip of nonwoven having a tongue section part.

18. (Withdrawn) The filter cartridge as described in Claim 16, wherein a porous material other than the strip of filament nonwoven having a tongue section part is used for a part of the filtration layer in the filter cartridge.

19. (Withdrawn) A filter cartridge prepared by winding a strip of nonwoven comprising a thermoplastic fiber obtained by bonding at least a part of fiber intersections around a perforated cylinder in a twill form, wherein at least two of the nonwovens comprising a thermoplastic fiber are concurrently wound around the perforated cylinder.

20. (Withdrawn) The filter cartridge as described in claim 19, wherein the widths of the strip of nonwoven are designated as  $L_1, L_2, L_3, \dots, L_n$  (mm), and the winding numbers of the strip of nonwovens having the respective widths are designated as  $N_1, N_2, N_3, \dots, N_n$ ; the relation between the former and the latter being expressed by the following equation (A):

$$7(L_1 \times N_1) + (L_2 \times N_2) + \dots + (L_n \times N_n) = 150$$

(provided that the total of  $N_1 + N_2 + \dots + N_n$  is an integer of 2 or more).

21. (Previously presented) The filter cartridge as described in claim 30, wherein the thermoplastic fiber is a thermally adherent composite fiber comprising a low melting point resin and a high melting point resin, difference in melting point between both resins being 10°C or more.

22. (Original) The filter cartridge as described in claim 21, wherein the low melting point resin is a linear low density polyethylene and the high melting point resin is a polypropylene.

23. (Previously presented) The filter cartridge as described in claim 30, wherein fiber intersections in the strip of nonwoven are bonded by thermal compression bonding by means of a hot embossing roll.

24. (Withdrawn) The filter cartridge as described in claim 1, wherein fiber intersections in the strip of nonwoven are bonded by hot air.

25. (Withdrawn) The filter cartridge as described in claim 1, wherein the strip of nonwoven is twisted.

26. (Withdrawn) The filter cartridge as described in claim 9, wherein the filtration layer of the filter cartridge has a void rate of 65 to 90%.

27. (Withdrawn) The filter cartridge as described in claim 9, wherein the strip of nonwoven comprises at least 30% by weight of the thermoplastic fiber.

28. (Previously presented) The filter cartridge as described in claim 30, wherein the strip of nonwoven has a width of 0.5 cm or more, and a product of a width (cm) and a mass per unit area ( $\text{g}/\text{cm}^2$ ) of the strip of nonwoven is 200 or less.

29. (Withdrawn) The filter cartridge as described in claim 9, wherein the strip of nonwoven is a filament nonwoven.

30. (Currently amended) A filter cartridge comprising a first filtration layer and a second filtration layer wherein the second filtration layer has an initial 80% trapped particle diameter that is 0.05 to 0.9 times as large as an initial 80% trapped particle diameter in the first filtration layer, and the first filtration layer is prepared by winding a strip of filament nonwoven in a twill form around the second filtration layer so as to make a cylindrical form and wherein the strip of filament nonwoven formed by a spun-laying method comprises thermoplastic fiber and the thermoplastic fiber is aligned with longitudinal edges of the strip to produce openings having a length oriented along a length of the strip and a width oriented between longitudinal edges of the strip wherein the length of the openings is substantially greater than the width of the openings having intersections and at least a part of the fiber intersections are thermally bonded.
